

FACILITIES AND MANUFACTURING RELOCATION

Our proprietary process will deliver your facility at best cost and on schedule...

Architecture / Engineering

A&E is the pivotal function to deliver our clients' new facilities on time, scope and budget. Therefore, this function is fully internalized at Everest since it is involved with most of the phases of a relocation project.

- *Business & Facility* Requirements
- Site Infrastructure Evaluation
- Facility Design / Costing
- Specifications for Construction Bids
- Procurement

Construction Management

Everest does not operate either industrial parks, facilities nor owns any land. Our vested interest is to deliver to our clients the best facility, on time, and at the best possible cost.

For that purpose, we have developed a proprietary bidding process that allows us to get optimum prices and establish controls when dealing with individual contractors and subcontractors. We provide full visibility to our clients on construction through on-site presence and thorough reporting.

Equipment Relocation

Relocating equipment is usually a critical step that must be accomplished in a minimum time since clients want their assets back in production as soon as possible.

We manage the entire process from teardown to installation and proofing at your new facility while ensuring compliance with all Mexican standards. Our service extends to include the identification of Mexican suppliers to service your equipment.
