## Belden is wired up in Mexico!

Belden, a world leader in the development of signal transmission solutions for wired and wireless enterprise networks, made a strategic investment into a new manufacturing capability in Nogales, Sonora, Mexico. The new plant, covering 380,000 sq. ft., started operations in August 2007.

Belden's Mexico new facility

The Nogales facility will produce wire and cable products in the US-Mexico border, a strategic market for Belden. Moreover, the facility will be the first of its kind in Mexico, and will feature state of the art technology. The facility represents a significant investment for Nogales with its 400 forecasted employees.

The start of operations on schedule is the result of a tight collaboration between Belden and THE EVEREST GROUP. In this pre-operational phase of the project, THE EVEREST GROUP provided the following services: Building Design, Construction Bidding, Construction Management, Equipment transfer and a series of Startup services, including licenses, registrations and permits.

The close collaboration between Belden and THE EVEREST GROUP has been determinant in this achievement. "Belden's people are very satisfied with Everest's work", expressed Kimberly Arana, Belden's Legal Representative, "because it is our single point of contact to manage the project from the beginning to the end". Adding to this comment, Belden's Project Manager said "We are very pleased with the support and communication we have concerning all the activities involved with this project, like hiring personnel, the operative services, Social Security Management and the Daycare Center".
