EVEREST, a key participant in the creation of Aerospace Trade Education in Mexico

Mexico is currently building its infrastructure to become a world-class player in Aerospace manufacturing and MRO.

Acknowledging the significant needs of the Aerospace industry, the Federal and State governments are creating the first Mexican aerospace trade school mandated to provide public education on aerospace/aviation trades and technical careers. This unique school, called Universidad Nacional Aeronáutica en Querétaro (UNAQ), is currently under construction next to Queretaro airport and will deliver its first graduates in 2009.

UNAQ - A design by THE EVEREST GROUP

THE EVEREST GROUP has been a significant player in the process leading to create this notable technological educational institution, working both with the industry and the Government.

THE EVEREST GROUP's proven expertise in Aerospace and unmatched experience in undertaking complex facility projects has resulted in the award of the contract to design and manage the construction of the UNAQ facilities.

The UNAQ building, a 330,100 sq.ft. facility spreading over 49.4 acres, is designed based on the concept of a Factory-School. It encompasses large factory-like manufacturing bays for hands-on practice, laboratories, material warehouse, classrooms, academic and administrative areas.

"As a Mexican national, I take pride in participating in such a once-in-a-life-time project. This public Aerospace School has no equivalent in the whole country" commented Rafael Martinez, Everest's Director of Architectural & Engineering Services.

THE EVEREST GROUP Architectural & Engineering capabilities deliver to its clients turnkey facilities solutions for their offshore implementations in Mexico.
